Artificial Intelligence Training in Chennai

The Complete AI Programme · Course Syllabus 2026

A seven-level career ladder spanning 31 in-depth industrial modules, from your first line of Python to production AI. Join at the level that fits you or climb the entire ladder, with a certificate at each stage and hands-on portfolio projects.

7	31	~47	4
Levels	Modules	Weeks	Real-World Projects

Programme at a glance

Level	Focus	Duration	Modules
Level 1: Python Foundation	Programming from zero to AI-ready · No prerequisites — taught from scratch	~5 Weeks	3
Level 2: Data Foundation	SQL, Statistics & Power BI · Unlocks: Data Analyst, MIS & Reporting Analyst	~7 Weeks	3
Level 3: Data Engineering	The Analytical Engineer Path · Unlocks: Analytical Engineer, Data Engineer	~8 Weeks	5
Level 4: Core AI	Machine Learning, NLP, Deep Learning & Computer Vision · Unlocks: Data Scientist, ML Engineer	~8 Weeks	4
Level 5: Generative AI Engineering	LLMs, RAG & Vector Databases · Unlocks: AI Engineer, GenAI Developer, RAG Engineer	~7 Weeks	5
Level 6: Agentic AI & Multi-Agent Systems	Agents, MCP & LangGraph · Unlocks: Agentic AI Engineer, AI Automation Engineer	~6 Weeks	6
Level 7: AI for Cloud & DevOps	AWS-Focused (no GCP or Azure) · Unlocks: LLMOps Engineer, AI Platform Engineer	~6 Weeks	6

Career Tracks

Level 1 Python is included free with every track from Level 2 upwards.

Track	Levels	Duration	Roles
Data Analyst Python, SQL, statistics, and Power BI. The fastest route into a data role, with a complete enterprise dashboard suite as your portfolio.	Levels 1 + 2	~12 weeks / ~3 months	Data Analyst, MIS & Reporting Analyst

Analytical Engineer Data Engineer and Data Analyst as one role. Everything above plus Git, PySpark, AWS, and a full production ETL pipeline from source to dashboard.	Levels 1 + 2 + 3	~20 weeks / ~4.5 months	Analytical Engineer, Data Engineer
Data Scientist Everything from the analyst track plus machine learning, NLP, deep learning, and computer vision. The classic full data science path.	Levels 1 + 2 + 4	~20 weeks / ~4.5 months	Data Scientist, ML Engineer
AI Engineer The most in-demand track of 2026. Data and machine learning foundations, then LLMs, RAG, and production AI agents.	Levels 1 + 2 + 4 + 5 + 6	~33 weeks / ~7.5 months	AI Engineer, GenAI Developer, Agentic AI Engineer
GenAI Engineer For working professionals who already know Python and basic ML. Straight into LLMs, RAG, agents, and MCP.	Levels 5 + 6	~13 weeks / ~3 months	GenAI Developer, RAG Engineer, Agentic AI Engineer
LLMOps Engineer For cloud and DevOps engineers. Learn what LLM applications are, then deploy, scale, secure, and monitor them in production.	Levels 5 + 7	~13 weeks / ~3 months	LLMOps Engineer, AI Platform Engineer
The Complete AI Programme The full ladder from your first line of Python to production AI platforms — every level, every project. Certificate at every stage.	All 7 Levels (L1 to L7)	~47 weeks / ~11 months	Full-Stack Production AI Engineer

LEVEL 1 Python Foundation

Programming from zero to AI-ready · No prerequisites — taught from scratch

Duration: ~5 Weeks · **Modules:** 3

Tools: Python 3, Anaconda, Jupyter, VS Code, NumPy, Pandas, Matplotlib, requests, Pydantic, FastAPI, asyncio

M01 Python Core — Language Fundamentals ~Weeks 1–2 · Programming

- Overview of Python and its real-world AI applications
- Environment setup: Anaconda & Jupyter Notebook
- Syntax, variables, comments, and conventions
- Data types: integers, floats, strings, type casting
- Introduction to standard functions (print, input)
- Operators and their types (arithmetic, logical, bitwise)
- Collections: Lists, tuples, sets, and dictionaries
- Indexing, slicing, and collection operations
- Conditional statements (if, elif, else)
- Loops: for, while, break, and continue statements
- Nested loops and functions; parameters & return values
- Built-in functions, local scope vs global scope
- filter, map, reduce, zip; lambda expressions
- Recursive, generator, and decorator functions
- Exception handling: try, except, finally, raise
- Handling exceptions by error type and custom exceptions

M01 Python Core — Modules, OOPs & Data ~Weeks 3–4 · Object-Oriented & Data

- File Handling: open(), with ... as statement
- Regular expressions with re module
- Standard utility modules: os, csv, sys, time, datetime, calendar
- OOPs Concepts: Class and object; polymorphism; inheritance
- Encapsulation; data abstraction; magic/dunder methods
- NumPy: Arrays and their fundamental advantage over lists
- NumPy Operations: Creating, indexing, slicing, reshaping, flattening
- Pandas: DataFrames and Series; creating from lists & dictionaries
- Data Ingestion: Reading and writing CSV, Excel, and JSON formats
- Data Manipulation: Selecting, filtering, sorting, and ranking
- Data Cleaning: Missing data imputation, transformation, categorical encoding
- Aggregations: GroupBy, aggregation methods, and apply()
- Matplotlib: Line, bar, scatter, and histogram plots
- Visualization Styling: Titles, labels, legends, styles, saving plots

M02 Python for AI Engineering ~Week 5 · AI Tooling & Services

- Environment & Project: venv, uv, pip, requirements.txt
- .env files and keeping API keys out of source code
- Modern project layout and clean architecture for an AI service
- Type hints and the typing module for robust Python
- requests and REST fundamentals — headers, auth, status codes
- JSON in depth: parsing, nested structures, serialisation
- API Error handling, retries, and exponential backoff algorithms
- Rate limits, throttling, and pagination strategies
- Pydantic models, field validation, schema generation
- JSON Schema and why modern AI tool calling depends on it
- Parsing and validating untrusted model output safely
- async / await and asyncio core fundamentals
- Concurrent API calls with asyncio.gather
- Generators and streaming token responses
- FastAPI: building your first AI microservice, routes, request & response models

LEVEL 2 Data Foundation

SQL, Statistics & Power BI · Unlocks: Data Analyst, MIS & Reporting Analyst

Duration: ~7 Weeks · **Modules:** 3

Tools: MySQL, MySQL Workbench, Power BI Desktop, Power Query, DAX, Star Schema Modelling

M03 SQL & Database Engineering ~Weeks 1–3 · Databases

- Data, Database, DBMS, and RDBMS; SQL vs NoSQL paradigms
- MySQL installation & setup; Database, Table, Row, Column concepts
- SELECT, WHERE; comparison & logical operators
- NULL handling (IS NULL / IS NOT NULL)
- BETWEEN, IN, LIKE, pattern matching, wildcards
- ORDER BY, DISTINCT, LIMIT, OFFSET, column aliases
- COUNT, SUM, AVG, MIN, MAX aggregate functions
- GROUP BY, HAVING; WHERE vs HAVING mechanics
- Table relationships; INNER, LEFT, RIGHT, FULL JOIN
- Multi-table joins and complex queries
- Primary key, foreign key, table constraints
- Normalization (1NF, 2NF, 3NF); integrity constraints
- INSERT, UPDATE, DELETE; DELETE vs TRUNCATE vs DROP
- Subqueries (nested, in SELECT, in WHERE)
- Views, stored procedures, and user-defined functions

M04 Power BI Enterprise Dashboards ~Weeks 4–6 · Business Intelligence

- Power BI Desktop interface (Report, Data, Model views); importing datasets
- Charts, filters, slicers; fact vs dimension tables; star vs snowflake schema
- Introduction to DAX; calculated columns vs measures
- BI project lifecycle (requirement gathering, development, UAT)
- Connecting Power BI to MySQL; Power Query data transformation & cleaning
- Date table with fiscal calendar logic; validating business benchmarks
- Enterprise Finance Model: Key finance KPIs, fiscal year logic, stable star schema
- Pre/post invoice discount logic; net sales, COGS, gross margin
- Full P&L statement, dynamic measure switching
- YoY & YoY% trend analysis across business cycles
- Sales & Marketing Analytics: Customer, region, and market performance; discount leakage
- Supply Chain Analytics: Forecast vs actual sales, inventory & delivery KPIs

M05 Maths & Statistics for Data & AI ~Week 7 · Mathematics

- Descriptive Statistics: Central tendency (mean, median, mode), dispersion, 5-number summary
- Probability Distributions: Bernoulli, Poisson, Uniform, Normal/Gaussian
- Central Limit Theorem (CLT) intuition and proofs
- Inferential Statistics: Hypothesis testing, p-value, significance levels
- Statistical Tests: Z-test, T-test, Type 1 & Type 2 errors, confidence intervals
- Non-parametric & Categorical Tests: Chi-square test of independence, ANOVA (Analysis of Variance)

LEVEL 3 Data Engineering

The Analytical Engineer Path · Unlocks: Analytical Engineer, Data Engineer

Duration: ~8 Weeks · **Modules:** 5

Tools: Git, GitHub, PySpark, AWS EC2, S3, IAM, VPC, Lambda, Glue, Athena, Redshift, Databricks

M06 Git & GitHub for Data Engineering ~Week 1 · Version Control

- Version control basics — git init, status, add, commit
- Branching workflows, merging, merge conflicts, pull requests on GitHub
- Advanced Git: Rebase vs merge, stash, tags, .gitignore, Git hooks for CI

M07 PySpark for Distributed Data Processing ~Weeks 2–3 · Big Data

- Apache Spark distributed architecture, execution model, cluster manager
- RDD fundamentals vs high-performance DataFrame API
- Distributed joins, repartition, coalesce, GroupBy, and window functions
- Reading and writing AWS S3 data; AWS Glue Catalog integration

M08 Cloud Fundamentals — AWS ~Weeks 4–5 · Cloud Infrastructure

- Compute & Storage: EC2 (Linux/Windows, SSH/RDP), S3 (versioning, lifecycle, storage classes, replication)
- Identity & Networking: IAM (users, groups, roles, policies), VPC (subnets, gateways, security groups, route tables)
- Messaging, Serverless & Databases: SNS, SQS, CloudWatch, Lambda, EventBridge, RDS (MySQL/PostgreSQL), DynamoDB NoSQL

M09 Introduction to Data Engineering & Lakehouses ~Week 6 · Data Architecture

- Pipeline overview, OLAP vs OLTP systems, Data Lake vs Warehouse vs Lakehouse
- ETL vs ELT architectures, Medallion Architecture (Bronze/Silver/Gold layers)
- Columnar storage formats: Parquet vs CSV/JSON performance benchmarks
- Dimensional modelling, star/snowflake schema, fact & dimension table designs

M10 End-to-End ETL Production Pipeline ~Weeks 7–8 · Capstone Project

- Ingest raw source data via serverless AWS Lambda into S3 Bronze layer
- Transform large-scale datasets using PySpark in AWS Glue/Databricks to Silver/Gold layers
- Performance tuning with explain(), Catalyst optimizer, predicate pushdown
- Step Functions orchestration, Athena serverless querying, Redshift warehouse loading, Power BI live publishing

LEVEL 4 Core AI

Machine Learning, NLP, Deep Learning & Computer Vision · Unlocks: Data Scientist, ML Engineer

Duration: ~8 Weeks · **Modules:** 4

Tools: Scikit-learn, XGBoost, NLTK, Word2Vec, TensorFlow, Keras, OpenCV, Dlib, NumPy, Pandas

M11 Machine Learning Algorithms & Ensembles ~Weeks 1–3 · Machine Learning

- Foundations & EDA: Missing values, imbalanced data, outliers, encoding, feature engineering
- Regression Models: Linear, Ridge, Lasso, ElasticNet, R^2, Logistic Regression
- Hyperparameter tuning: GridSearchCV, RandomizedSearchCV, validation curves
- Classification & Ensembles: SVM, KNN, Decision Trees, Bagging, Random Forest
- Advanced Boosting: Gradient Boosting, AdaBoost, XGBoost for tabular competitions
- Unsupervised Learning: Principal Component Analysis (PCA), K-Means clustering, end-to-end ML project

M12 Natural Language Processing (NLP) ~Weeks 4–5 · NLP

- Text Preprocessing: Tokenization, stemming, lemmatization, stopwords, POS tagging, Named Entity Recognition (NER)
- Vectorization: Bag of Words, N-grams, TF-IDF calculation and weighting
- Word Embeddings: Word2Vec architectures (Continuous Bag of Words - CBOW, Skip-gram)
- Module Project: Spam / Ham Classifier — a working text classifier trained end-to-end

M13 Deep Learning & Neural Architectures ~Weeks 6–7 · Deep Learning

- Neural Network Foundations: Perceptron, Artificial Neural Networks (ANN), Backpropagation, Vanishing Gradient
- Activation functions: Sigmoid, Tanh, ReLU, LeakyReLU, Softmax
- Modern optimizers: SGD, Momentum, RMSprop, Adam
- Convolutional Neural Networks (CNN): Convolutions, Kernels, Pooling, Fully Connected layers
- Recurrent Neural Networks (RNN): Hidden state dynamics, LSTM gates, Gated Recurrent Units (GRU)

M14 Computer Vision & Real-Time Alert Systems ~Week 8 · Computer Vision

- OpenCV environment setup, image transformations, video stream manipulation
- Haar Cascade classifiers for real-time face and eye detection
- Dlib 68-point facial landmark detection algorithms
- Eye/Mouth Aspect Ratio (EAR/MAR) mathematical modeling
- Project: Real-time driver drowsy-state detection and audible alert warning system

LEVEL 5 Generative AI Engineering

LLMs, RAG & Vector Databases · Unlocks: AI Engineer, GenAI Developer, RAG Engineer

Duration: ~7 Weeks · **Modules:** 5

Tools: OpenAI, Claude, Gemini, Hugging Face, Ollama, FAISS, Chroma, pgvector, Pinecone, Weaviate, RAGAS, LangChain

M15 LLM Foundations & Architecture Internals ~Weeks 1–2 · Generative AI

- 1. What are LLMs? Historical timeline, foundation models, paradigm shifts
- 2. Generative AI: The Big Picture — VAEs, GANs, Diffusion models, Transformers
- 3. Tokenization Deep Dive — Byte-Pair Encoding (BPE), WordPiece, SentencePiece
- 4. Embeddings & Token Representations — high-dimensional semantic spaces
- 5. LLM Architecture Internals — Decoder-only, RMSNorm, SwiGLU activation, KV cache
- 6. Positional Encodings — RoPE (Rotary Position Embeddings), ALiBi, Sinusoidal, context extension
- 7. Mixture of Experts (MoE) — sparse activation, expert routing, load balancing
- 8. Context Window & Attention Patterns — GQA (Grouped-Query Attention), MLA, Flash Attention, long-context
- 9. Pre-training Objectives — next-token prediction, Masked LM, causal vs bidirectional
- 10. Logits, Softmax & Temperature scaling mechanics
- 11. Sampling Strategies — greedy, top-k, top-p (nucleus), min-p, beam search

M16 Prompt Engineering & In-Context Learning ~Week 3 · Prompt Engineering

- 12. Multi-turn Conversations & Stateful Memory management
- 13. Context Engineering — budgeting token window, tools injection, compaction, cache order
- 14. Prompt Engineering — zero-shot, few-shot, Chain-of-Thought (CoT)
- 15. Advanced Prompting — Tree-of-Thought (ToT), Self-Consistency, HyDE (Hypothetical Document Embeddings)
- 16. Prompt Optimization — Automatic Prompt Engineer (APE), prompt chaining, ReAct
- 17. In-Context Learning dynamics, demonstration selection, and calibration

M17 Training, Fine-Tuning & Evaluation ~Week 4 · Model Adaptation

- 18. Fine-tuning Strategies — LoRA, QLoRA, DoRA, Parameter-Efficient Fine-Tuning (PEFT)
- 19. Instruction Tuning & RLHF — Supervised Fine-Tuning (SFT), Reward Models, PPO, DPO, Alignment
- 20. Hallucinations & Limitations — detection, grounding, and mitigation strategies
- 21. LLM Security & Safety — prompt injection, jailbreaking, guardrails implementation
- 22. Evaluation & Benchmarks — perplexity, LLM-as-a-judge, domain-specific evaluation suites

M18 Production & Open-Source Ecosystem ~Week 5 · Model Serving

- 23. Inference Optimization — KV cache optimization, quantization (AWQ, GPTQ, GGUF), speculative decoding, vLLM serving
- 24. Scaling Laws & Emergent Abilities — Chinchilla laws, compute optimal training, power-law scaling
- 25. Open-Source LLMs & Local Deployment — Llama 3, DeepSeek, Qwen with Ollama
- 26. Hugging Face: The Open-Source AI Hub — Hub, Transformers, Datasets, PEFT, TRL, Spaces, Inference Endpoints
- 27. LLM APIs & Practical Usage — universal API pattern, streaming tokens, function calling, cost optimization

M19 RAG, Agents & Multimodal AI ~Weeks 6–7 · RAG Systems

- 28. Retrieval-Augmented Generation (RAG) — chunking strategies, embeddings, vector search, hybrid retrieval
- 29. Corrective & Self-RAG — CRAG, Self-RAG architectures
- 30. Knowledge Graphs — triples, RDF vs property graphs, Cypher, grounding LLMs
- 31. GraphRAG & Knowledge Graphs for complex entity relationship querying
- 32. Adaptive RAG & Query Routing across heterogeneous datastores
- 33. Multimodal RAG — indexing and querying text, tables, and images
- 34. Agents & Tool Use — function calling, ReAct loops, Model Context Protocol (MCP), multi-agent patterns
- 35. Multi-Modal LLMs — vision encoders, early fusion, agentic visual reasoning

LEVEL 6 Agentic AI & Multi-Agent Systems

Agents, MCP & LangGraph · Unlocks: Agentic AI Engineer, AI Automation Engineer

Duration: ~6 Weeks · **Modules:** 6

Tools: LangChain, LangGraph, CrewAI, AutoGen, OpenAI Agents SDK, MCP, A2A, Tavily, n8n, LangSmith, Langfuse

M20 Agent Foundations & Tool Design ~Week 1 · Agent Architecture

- 1. Introduction to AI Agents — what agents are and why they represent the future of software
- 2. Agent Lifecycle — the complete 6-phase architecture powering every autonomous AI agent
- 3. Function Calling — OpenAI and Anthropic tool use APIs
- 4. Structured Outputs — JSON mode, Pydantic schemas, and reliable parsing
- 5. Designing Tools — creating effective tools and strict interface boundaries for agents

M21 Tool Ecosystem, Computer Use & Reasoning ~Week 2 · Agent Execution

- 6. Agent Tool Ecosystem — browser, code execution, API, and database tools
- 7. Computer-Use Agents — driving a real screen: pixels, grounding, verification, containment
- 8. ReAct Pattern — reasoning and acting in loops
- 9. Agent Planning — task decomposition and planning strategies
- 10. Reasoning Patterns — Chain-of-Thought, Self-Consistency, structured reasoning

M22 Advanced Reasoning, LangChain & RAG ~Week 3 · Agent Frameworks

- 11. Tree of Thought — branching exploration, parallel reasoning, backtracking
- 12. LangChain Fundamentals — building agents with LangChain core & community
- 13. Agent Frameworks — CrewAI, AutoGen, and framework architectural comparison
- 14. Vector Databases — Pinecone, Weaviate, ChromaDB for RAG
- 15. Advanced RAG — chunking strategies, hybrid search, reranking with Cohere

M23 Evaluation, Protocols, Memory & LangGraph ~Week 4 · LangGraph & Memory

- 16. Agent Evaluation — testing and evaluating agent performance & task accuracy
- 17. Model Context Protocol (MCP) — MCP standard for standardized tool and context interfaces
- 18. Agent Memory Systems — short-term, long-term, and episodic memory
- 19. LangGraph Agents — stateful multi-step agents, cyclical graphs, checkpointing
- 20. Multi-Agent Patterns — orchestration, delegation, collaborative teams

M24 Multi-Agent Frameworks, Protocols & Safety ~Week 5 · Multi-Agent Teams

- 21. CrewAI Multi-Agent Systems — role-based crews and collaborative AI teams
- 22. OpenAI Agents SDK — building production agents with OpenAIs official SDK
- 23. Agent-to-Agent Protocol — Googles A2A protocol for agent interoperability
- 24. Agent Guardrails & Safety — input validation, output filtering, safety boundaries
- 25. Agent Observability — tracing, logging, and debugging agent systems with LangSmith/Langfuse

M25 Workflow Patterns, Deployment & Production ~Week 6 · Production Agents

- 26. Agentic Workflow Patterns — query routing, parallel execution, chaining, event-driven orchestration
- 27. Agent Deployment — production deployment patterns and horizontal scaling
- 28. Durable Agents — surviving crashes, deploys, and human-in-the-loop pauses
- 29. Full-Stack GenAI Application — production architecture: React + FastAPI + LangGraph + HITL
- 30. Autonomous AI Research — by Andrej Karpathy: agents that autonomously run ML experiments overnight

LEVEL 7 AI for Cloud & DevOps

AWS-Focused (no GCP or Azure) · Unlocks: LLMOps Engineer, AI Platform Engineer

Duration: ~6 Weeks · **Modules:** 6

Tools: AWS Bedrock, Bedrock AgentCore, Bedrock Knowledge Bases, SageMaker, Lambda, Step Functions, OpenSearch, Docker, Kubernetes (EKS), FastAPI, Flask, GitHub Actions, MLflow, Weights & Biases, DVC

M26 Cloud Foundations & Security for AI ~Week 1 · Cloud Security

- Why Cloud for GenAI — when cloud helps, when it hurts, and what you actually save
- IAM, cost & security basics — identity, regions, data residency, cost guardrails

M27 AWS Bedrock & Model Fine-Tuning ~Week 2 · AWS Bedrock

- AWS Bedrock models — model catalogue, invoke patterns, streaming, Guardrails
- Bedrock AgentCore — agent primitives, tool use, multi-agent orchestration
- SageMaker fine-tuning — training jobs, custom models, Bedrock custom model import

M28 Serverless Agents & RAG on AWS ~Week 3 · Serverless AI

- Lambda + Step Functions agents — serverless agent orchestration patterns
- Bedrock Knowledge Bases RAG — managed RAG with Bedrock KB and OpenSearch
- Project Week 3: Multi-Agent App on AWS — a 4-agent research team on Bedrock AgentCore (orchestrator + research + analyst + writer), built without a framework

M29 MLOps & Container Foundations ~Week 4 · Containers & MLOps

- What is MLOps? — the discipline of productionizing machine learning
- Docker fundamentals — containers, images, and Dockerfiles
- Docker for ML — containerizing ML applications and dependencies
- Building ML APIs — FastAPI and Flask for high-concurrency model serving

M30 CI/CD & Experiment Tracking ~Week 5 · CI/CD Pipelines

- CI/CD fundamentals — GitHub Actions, automated testing
- CI/CD for ML — automated training, testing, and deployment pipelines
- Experiment tracking — MLflow, Weights & Biases, tracking runs
- Model versioning — DVC, model registries, artifact management

M31 Cloud Deployment, Monitoring & Scaling ~Week 6 · Production Scaling

- Cloud deployment — AWS SageMaker real-time endpoints and asynchronous inference
- Cloud GPU & hardware selection — A100 vs H100 on AWS, cost optimization, choosing the right accelerator
- Serverless ML — AWS Lambda for lightweight inference
- Model monitoring — drift detection, performance tracking, automated alerting
- Kubernetes for ML — Amazon EKS basics for scaling distributed ML workloads
- Project Week 6: MLOps Deployment Pipeline — containerize trained model with Docker, track experiments with MLflow/DVC, wire GitHub Actions CI/CD to SageMaker, and add drift monitoring

Real-World AI Projects

1. AI-Based Intelligent Chatbot (IBM Watson & Python)

Engineered an enterprise-grade AI chatbot capable of understanding user intent, entity extraction, context retention, and multi-turn dialogue resolution.

Skills: IBM Watson, NLP, Context Graphs, Webhook APIs

2. E-Commerce Recommendation System (TensorFlow & Python)

Built a hybrid recommendation engine combining collaborative filtering and deep content-based neural networks to personalize user product catalogs at scale.

Skills: TensorFlow, Neural Embeddings, Matrix Factorization, Scikit-learn

3. Deep Learning Image Recognition & Object Detection (TensorFlow, Keras & CNN)

Trained a high-accuracy Convolutional Neural Network with Transfer Learning for automatic multi-class object detection and categorization in complex scenes.

Skills: CNN, ResNet, Data Augmentation, OpenCV

4. Test Environment & Server Automation Pipeline (Python & Cloud AI Infrastructure)

Automated dynamic provisioning and benchmarking of GPU-accelerated model validation servers for continuous integration and real-time stress testing.

Skills: Automated Testing, CI/CD, GPU Profiling, Docker

Greens Technologies · 25 branches across Chennai, Bengaluru, Coimbatore, Salem and Trichy · Classroom & Live Online · Tamil & English
