GREENS TECHNOLOGYS

ONE COURSE. FROM RAW DATA TO DECISIONS.

DATA ANALYTICS

Collect. Clean. Analyse. Turn data into decisions.

BEGINNER TO ADVANCE

SQL | Python | Power BI | Excel | Tableau | Projects

Data Analytics Master Course

3 Months | 6 Modules | 108 Chapters

Since 2008 - 5,00,000+ careers launched

THE PROGRAM

From raw data to business decisions

Learn the analyst workflow step by step, from SQL and Excel to Power BI dashboards, Python and Tableau.

SQL + Python | Power BI + Excel | Tableau | Real-Time Projects

Build the foundations. Then connect the whole picture.

Collect data from databases and Excel files, clean and analyse it, and turn it into dashboards and reports. Develop projects you can explain in interviews.

Who this course is for

Freshers | IT and non-IT graduates

Graduates from any degree who want to start a career in data analytics. Suitable for freshers and working professionals.

Experienced IT Professionals | Moving into data

Working professionals who want to add SQL, Power BI, Python, Excel and Tableau to their toolkit.

Anyone with gap | Restarting a career

Return to the industry with a practical, hands-on analytics skill set.

Who is a Data Analyst?

An IT professional who collects, cleans, processes, and analyzes data to identify trends, discover insights, and help organizations make better business decisions.

WHY DATA ANALYTICS

What a Data Analyst does

Key responsibilities on the job, and the top six reasons to become a data analyst.

Key Responsibilities of a Data Analyst

Data Collection
Gather data from databases, Excel files, applications, and other sources.

Data Cleaning
Identify and correct missing, duplicate, or inaccurate data.

Data Analysis
Analyze data to discover patterns, trends, and business opportunities.

Data Visualization
Create interactive dashboards, charts, and reports using Power BI

Business Reporting
Track KPIs, sales performance, and business growth.

Decision Support
Provide data-driven recommendations to improve business.

Top SIX Reasons to Become a Data Analyst

1. **Growing Career Opportunities**
2. **Suitable for Freshers & Working Professionals**
3. **Attractive Salary Potential**
4. **Multiple Job Opportunities**
5. **Less Coding Compared to Software Development**
6. **Future Career Growth with AI**

COURSE PLAN

One course. A clear sequence.

Six modules in the order the tools build on each other, finishing with Tableau and real-time projects.

3 Months | 6 Modules

108 chapters | 2 real-time projects | Course duration: 3 Months

01	MSSQL & TSQL	24 chapters
02	Power BI	27 chapters
03	Python (For Data Analysts)	17 chapters
04	Excel Analytics (Basic to Advanced)	22 chapters
05	Realtime Projects	2 projects
06	Tableau	18 modules

WHO CAN JOIN?

- Students
- Starters
- Experienced Professionals

Data Analytics: Detailed Course Content - MSSQL & TSQL / Power BI / Python / Excel Analytics / Tableau, real-time projects and career guidance topics.

MODULE 1 OF 6 | CHAPTERS 01-24

1 MSSQL & TSQL

SQL Server, T-SQL queries, joins, procedures, performance and tuning

24 chapters

SQL Database Job Roles 1

- Database Intro
- OLTP, DWH, OLAP
- DBMS Basics
- Data Analyst Job Roles

Database Intro & Installations 2

- SQL Server Installations
- Instance & Collations
- SSMS Tool Installation
- Connections, Authentications

SQL Basics V1 (Commands) 3

- SQL Basics (DDL, DML, etc..)
- Creating Databases, Tables
- Data Inserts (GUI, SQL)
- Basic SELECT Queries

SQL Basics V2 (Commands, Operators) 4

- DDL: Create, Alter, Drop
- DML: Insert, Update, Delete
- DQL: Select, Fetch
- Add, Truncate Statements
- SQL Operators

Data Types & Variables 5

- Integer Data Types
- Character, MAX Data Types
- Decimal & Boolean Data Types
- Date and Time Data Types
- SQL_Variant Type

Data Imports 6

- Data Imports with Excel
- Data Imports with CSV
- Data Types Detection
- OLE-DB Connections
- ORDER BY, TOP, OFFSET

Schemas & Batches 7

- Schemas & Table Grouping
- Real-world Banking Database
- 2 Part, 3 Part & 4 Part Naming
- Batch Concept & “Go” Command

Constraints, Keys & RDBMS 8

- Null, Not Null Constraints
- Unique Key & Check
- Primary Key Constraint
- Foreign Keys, Default
- DB Diagrams & ER Models

Normal Forms & RDBMS 9

- Normal Forms: 1 NF, 2 NF
- 3 NF, BCNF and 4 NF
- 1:1, 1:M, M:1 Cardinality
- Cascading Keys, Self Referencing Keys

Joins & Queries 10

- Joins: Table Comparisons
- Inner Joins & Matching Data
- Outer Joins: LEFT, RIGHT
- Full Outer Joins & Aliases
- Self Joins & Aliases

Sub Queries 11

- Basic Sub Queries
- Aggregations
- Combining Queries
- Correlated Sub Queries
- UNION, UNION ALL

Group By Queries 12

- Group By, Distinct
- GROUP BY, HAVING
- Cube( ) and Rollup( )
- Sub Totals & Grand Totals
- Grouping( ) & Usage
- ISNULL, COALESCE

MODULE 1 OF 6 | CHAPTERS 01-24 - CONTINUED

MSSQL & TSQL · continued

24 chapters

Joins with Group By, Sub Queries 13

- 3 Table, 4 Table Joins
- Join Queries & WHERE
- Join & Group By, Sub Queries
- IIF(), CASE Statement
- EXISTS, NOT EXISTS
- Query Execution Order

Views & RLS 14

- Views: Realtime Usage
- DML, SELECT with Views
- WITH CHECK OPTION
- Row Level Security (RLS)
- Important System Views

Functions & Queries 15

- User Defined Functions
- Scalar, Table Value Functions
- Variables & Parameters
- Date & Time Functions
- String Functions
- Aggregated Functions
- Data Conversion Functions

Advanced SQL & Window Functions 16

- Window Functions (Rank)
- Row_Number, DenseRank
- Partition By & Order By
- Lag & Lead Functions
- Pivot, UnPivot
- Running Totals
- Moving Average

Stored Procedures - 1 17

- Stored Procedures: Realtime Use
- Parameters Concept with SPs
- Procedures with SELECT
- System Stored Procedures
- Stored Procedures, Tuning

Stored Procedures - 2 18

- Merge Statement (Upsert)
- Merge with OLTP & DWH
- Matched and Not Matched
- Merge & SP Recompilations

Triggers & Automations 19

- Need for Triggers in Real-world
- DDL & DML Triggers
- For / After Triggers
- Instead Of Triggers
- Disabling DMLs Triggers

Transactions & ACID 20

- Auto Commit Transaction
- Explicit Transactions
- COMMIT, ROLLBACK
- Checkpoint & Query Blocking
- READPAST, LOCKHINT
- TRY...CATCH & Error Handling

SQL Query Performance & Indexing 21

- Clustered vs Nonclustered Indexes
- Index Seek vs Scan
- Execution Plans
- SARGable Queries
- Tuning Queries
- Avoiding SELECT *
- Indexing JOIN/WHERE columns
- Statistics Basics
- Query Optimization Examples

CTEs & Tuning 22

- Common Table Expression
- CTEs for Data Retrieval
- CTEs for DML Operations
- Data Cleansing Techniques
- Duplicate Detection/Removal

Temp Tables & Query Techniques 23

- Local & Global Temp Tables
- SELECT..INTO Statement
- Cursor Basics – When to Use & Avoid
- NULLIF
- Basic Execution-Plan Reading

Bonus / Advanced Module: SQL Server Internals 24

- Database Engine Components
- Parser, Compiler & Optimizer
- Parsing and Compilation
- Memory Manager & IO Managers

MODULE 2 OF 6 | CHAPTERS 01-27

2 Power BI

Reports, Power Query, DAX, data modelling, cloud and PL-300 guidance

27 chapters

Power BI Intro, Installation 1

- Power BI & Data Analysis
- Power BI Eco System
- Power BI Design Tools
- Power BI Installation

Report Design Concepts 2

- Basic Report Design (PBIX)
- Data Points, Spotlight
- Visual Interactions & Edits
- Focus Mode, PDF Exports

Grouping, Hierarchies 3

- Creating Groups: Lists
- Creating Groups: Bins
- Hierarchies & Drill-Downs
- Drill Up, Conditional DrillDown

Slicer & Visual Sync 4

- Slicer Visual in Power BI
- Slicer: Format Options
- Single Select, Multi Select
- Slicer: Select All On / Off
- Visual Sync with Slicers

Filters & Drill Thru 5

- Power BI Filters
- Basic, Top & Advanced
- Visual Filters, Page Filters
- Report Level Filters, Clear Filter
- Drill Thru Filters & Usage

Bookmarks, Buttons 6

- Power BI Bookmarks
- Images: Actions, Bookmarks
- Buttons: Actions, Bookmarks
- Page to Page Navigations
- Score Cards, Master Pages

SQL DB Access & Big Data 7

- SQL DB Access, Queries
- Storage Modes: Direct Query
- Formatting & Date Time
- Storage Modes in Power BI
- Data Modeling & Formatting

Power BI Visualizations 8

- Charts, Bars, Lines, Area
- Tree Maps & Axis Items
- Funnel, Card, Mult-Row Card
- Pie Charts & Waterfall
- Scatter Chart, Play Axis
- Infographics, Classifications

Power Query Transformations - 1 9

- Power Query (Mashup)
- ETL Transformations in PBI
- Table Combine Options
- Merge, Union All Options
- Missing Values, Duplicate Records
- Wrong Data Types, Outliers
- Close, Apply & Visualize

MODULE 2 OF 6 | CHAPTERS 01-27 - CONTINUED

Power BI · continued

27 chapters

Power Query Transformations - 2 — 10

- Group By Transformation
- Aggregate, Pivot Operation
- Reverse Rows, Count Rows
- Data Cleaning, Null Handling
- Data Type Detection, Change
- Rename, Replace, Move
- Fill Up, Fil Down

Power Query Transformations - 3 — 11

- String / Text Transformations
- Split, Merge, Extract, Format
- Numeric and Date Time
- Add Column & Expressions
- Column From Examples

Power Query Transformations - 4 — 12

- Parameters in Power Query
- Static Parameters, Defaults
- Dynamic Dropdowns, Lists
- Linking with Table Queries
- Step Edits, Type Conversions

Power BI Cloud & Fabric — 13

- Power BI Cloud, Microsoft Fabric
- Microsoft Fabric Concepts
- Fabric One Lake (DWH, LH, etc.)
- Microsoft Fabric Workspace
- Power BI Desktop Connections
- Report Uploads (PBIX)
- Report Edits, Semantic Models

Power BI Cloud Dashboards — 14

- Power BI Dashboards
- Dashboard Creation, Usage
- Pin Visuals, Pin LIVE Pages
- Add Image, Video Tiles
- Q&A & Pin Tiles

Power BI Cloud Operations — 15

- Report Shares, Alerts
- Subscriptions, Exploration
- Downloads & Edits
- Report Cloning in Cloud
- QR Codes, Web Publish
- Lineage & Metrics

Power BI Cloud Gateways — 16

- Data Gateways, Data Refresh
- Install, Configure Gateways
- Data Refresh & Scheduling
- Gateway Optimizations
- Incremental Refresh
- Large Dataset Optimization

Power BI Cloud Apps — 17

- Power BI Apps: Creation
- App Sections & Content
- Audience & App Security
- App Updates, Favorites
- App URL, End User Access

Power BI Report Server, RDL — 18

- Power BI Report Server
- RS Config Tool Options
- Report Database, TempDB
- Web Service & Server URL
- Report Builder Tool
- Paginated Report (RDL)
- RDL Report Publish

MODULE 2 OF 6 | CHAPTERS 01-27 - CONTINUED

Power BI · continued

27 chapters

DAX Concepts & Calculations 19

- DAX Concepts: Intro & Realtime Need
- DAX Columns: Creation, Use
- DAX Measures: Creation, Use
- DAX Functions: IIF, ISBLANK
- SUM, CALCULATE Functions

DAX Quick Measures 20

- Quick Measures in Power BI
- Running Totals
- Star Rating Calculations
- DAX Measures in Data View
- DAX in Cloud Reports

Data Modelling 21

- Dimensions Tables
- Fact Tables & DAX Measures
- Data Models & DDAX Joins
- Star & Snowflake Schemas
- Many-to-Many Relationships
- Calculation Groups

DAX Joins, Variables 22

- CALCULATEX & Variables
- COUNT, COUNTA, etc..
- SUM, SUMX, etc..
- SELECTED MEMEBER
- Filter Context, RETURN

DAX Models & Calculations 23

- VAR, SWITCH, SUMMARIZE
- TREATAS, USERELATIONSHIP
- CROSSFILTER, GENERATE
- RANKX, TOPN, WINDOW
- OFFSET, INDEX

DAX Time Intelligence 24

- Need for Time Intelligence
- Date Table Generation
- Time Intelligence with DAX
- PARALLELPERIOD, DATE
- CALENDAR, Total Functions
- YTD, QTD, MTD with DAX

DAX - Row Level Security 25

- RLS: Row Level Security
- Data Modelling & Roles
- Add Cloud Users & KPIs
- CoPilot with DAX

DAX – Analytical Reports 26

- DAX with Excel
- Analytical Reports
- Virtual Cube Concepts
- Cross Filter Reporting
- Alerts, Data Activator

PL 300 Exam Guidance 27

- PL 300 Exam Guidance
- Exam Samples
- Exam Scenarios

MODULE 3 OF 6 | CHAPTERS 01-17

3 Python (For Data Analysts)

Core Python, data types, loops, pandas dataframes and SQL access

17 chapters

Python Introduction 1

- Python Introduction
- Python Versions
- Python for Data Analysts
- Python Architecture

Python Installations 2

- Python Installations
- Anaconda Installation
- Python IDE & Usage
- Jupyter Notebooks

Python Print Statement 3

- Python Print Statement
- print(), print()
- Testing Case Sensitivity
- Single Line, Multi Line prints
- print() with single quotations
- Debug with AI (AI Assistants)

Python Variables 4

- Python Variables
- Assigning values
- Variable Value Reads
- Multiple Variables & Print()

Python Operators 5

- Athematic Operators
- Python String Literals
- Single, Double Quotes
- Format Strings (f string)
- Comparison, Indexing Operators

Python Data Types 6

- Python Data Types
- Integer, Float, String Data Types
- Type Casting
- Type Identification
- Multi Value Assignments

Python Lists 7

- Creating Python Lists
- Printing List Items
- Print List Slices
- Empty Lists, Append
- Loops, List Updates

Python Dictionaries 8

- Python Dictionary
- Indexing Dictionaries
- Edit Key Values
- Lists inside Dictionaries
- Delete & Clear

Python Tuples 9

- Python Tuples
- Defining, Indexing
- Length(), Type()
- Mixed Values in Tuples
- Overwriting Tuples

MODULE 3 OF 6 | CHAPTERS 01-17 - CONTINUED

Python (For Data Analysts) · continued

17 chapters

Python IF..ELSE Condition 10

- If..Else conditions
- if..elif..else & Shorthand if
- composite conditions
- in & negation operators
- range conditions

Python Loops 11

- Python For Loop
- For Loop @ Range
- For Loop @ Sequence Values
- While Loop, Exit Conditions
- Break, Continue, Paas

Python Dataframes 12

- Dataframes: Creation
- Pandas Dataframes
- Dataframes From Single List
- Dataframes from Dictionary
- Display Dataframes, List Items
- Identify, Replace Nulls, NumPy

Python SQL DB Access 13

- SQL DB Access with Python
- pyodbc module, sql functions
- SQL Query Executions: DDL, DML
- Filters, Aggregations with SQL
- Dataframe Usage with SQL

Dataframe Transformations - 1 14

- Dataframe Transformations
- Concat & Append
- Merge Function
- Join with Multiple Dataframes
- Data Type Checks, Conversions
- Loops with Dataframes

Dataframe Transformations - 2 15

- Pandas - Cleaning Data
- Replace, Transform Columns
- Data Discovery & Column Fill
- Identify & Remove Duplicates
- dropna(), fillna() Functions

Dataframe Transformations - 3 16

- Python Functions for date, time
- Now() Function in Python
- date, time Functions
- Calendar Data Generation

Python Functions & Lambda 17

- Python Functions & Usage
- Function Parameters
- Default & List Parameters
- Python Lambda Functions
- Return & Print @ Lamdba

MODULE 4 OF 6 | CHAPTERS 01-22

4 Excel Analytics (Basic to Advanced)

Functions, pivots, dashboards, lookups, VBA macros and statistics

22 chapters

Excel Concepts, Basic Functions 1

- Excel Basics & Concepts
- Excel Functions
- Excel Operations

Formatting and Proofing 2

- Currency Format
- Custom and Special Formats
- Formatting Cells
- Absolute, Mixed
- Relative Referencing

Functions 3

- Sumif, Sumifs, Countif
- Countifs, Averageif
- Averageifs, Nested If
- IfError Statement
- And, Or, Not

Protecting Excel 4

- File Level Protection
- Workbook
- Worksheet Protection
- Security Concepts
- Realtime Issues, Solutions

Text Functions 5

- Upper, Lower, Proper
- Left, Mid, Right
- Trim, Len, Exact
- Concatenate
- Find, Substitute

Date & Time Functions 6

- Today, Now
- Day, Month, Year
- Date, Date if, Date Add
- EOMONTH
- Weekday Functions

Advanced Techniques 7

- Paste Formulas
- Paste Formats
- Paste Validations
- Transpose Tables

New in Excel & 365 8

- Charts – Tree map & Waterfall
- Sunburst, Box and whisker Charts
- Combo Charts – Secondary Axis
- Adding Slicers Tool in Pivot & Tables
- Using Power Map and Power View
- Forecast Sheet, park lines

New in Excel & 365 9

- Using 3-D Map
- Pivot Tables, Time Lines
- Auto complete a data range
- Quick Analysis Tool
- Smart Lookup

Printing Workbooks 10

- Setting Up Print Area
- Customizing Headers
- Templates
- Print Titles –Repeat Rows

Sorting and Filtering 11

- Filtering on Text
- Numbers & Colors
- Sorting Options
- Advanced Filters
- Filter Criteria

MODULE 4 OF 6 | CHAPTERS 01-22 - CONTINUED

Excel Analytics (Basic to Advanced) · continued

22 chapters

What If Analysis 12

- Goal Seek
- Scenario Analysis
- Data Tables (PMT Function)
- Solver Tool

Logical Functions 13

- If Function
- How to Fix Errors – if error
- Nested If
- Complex if and or functions

Data Validation 14

- Number, Date & Time
- Text and List Validation
- Custom validations formulas
- Dynamic Dropdowns

Lookup Functions 15

- V lookup
- Xlookup
- Reverse Lookup
- Index and Match
- Worksheet linking

Pivot Tables - 1 16

- Creating Simple Pivot Tables
- Filtering PivotTables
- Modifying PivotTable Data
- Grouping, Calculated Fields

Pivot Tables - 2 17

- Array with IF, LEN
- MID function formulas.
- SLICERS, Filter data
- Manage Primary Axis
- Manage Secondary Axis

Excel Dashboard 18

- Planning a Dashboard
- Tables and Charts to Dashboard
- Dynamic Contents to Dashboard

VBA Macro – Level 1 19

- Using Outlook Namespace
- Send automated mail
- Outlook Configurations, MAPI
- Worksheet Operations
- Workbook Operations

VBA Macro – Level 2 20

- Merge Worksheets using Macro
- Merge multiple excel files into one sheet
- Split worksheets using VBA
- Worksheet copiers

Statistics For Data Analysis - 1 21

- Mean, Median
- Mode, Variance
- Standard Deviation
- Correlation

Statistics For Data Analysis - 2 22

- Probability Basics
- Hypothesis Testing
- Confidence Interval
- Outliers, Normal Distribution

MODULE 6 OF 6 | 18 MODULES

6 Tableau

18 modules

Complete syllabus, beginner to advance - visuals, calculations, dashboards and data connections

Module 1: Introduction to Tableau 1

- **1.1 Overview of Tableau**
- What is Tableau?
- Tableau as a Business Intelligence & Data Visualization tool
- Tableau products:
- Tableau Desktop
- Tableau Server
- Tableau Online
- Tableau Public
- Tableau architecture & workflow
- **1.2 Uses and Applications of Tableau**
- Business reporting & dashboards
- Sales & marketing analytics
- Finance & operations reporting
- Healthcare, retail & supply chain use cases
- Tableau vs other BI tools (Power BI, Excel)

Module 2: Data Types in Tableau 2

- **2.1 Numeric Data Types**
- Number
- Decimal
- Whole
- Difference between integer and floating values
- **2.2 String (Text) Data Type**
- String data usage
- Cleaning and formatting text data
- **2.3 Date & Time Data Types**
- Date
- DateTime
- Date hierarchy (Year → Quarter → Month → Day)
- **2.4 Geographic Data Types**
- Country, State, City, Postal Code
- Latitude & Longitude
- Geographic roles in Tableau
- **2.5 Boolean Data Type**
- True / False values
- Use cases in filtering and calculations

Module 3: Dimensions & Measures 3

- **3.1 Dimensions**
- Definition of dimensions
- Discrete vs Continuous dimensions
- Examples: Name, City, State, Category
- **3.2 Measures**
- Definition of measures
- Aggregated vs Non-aggregated measures
- Examples: Sales, Income, Expense
- **3.3 Converting Dimensions & Measures**
- Changing dimension to measure and vice versa
- Real-time business scenarios

Module 4: Data Organization 4

- **4.1 Combine**
- Combining fields into a single field
- Use cases for combine
- **4.2 Group**
- Creating groups manually
- Grouping categories (Top vs Others)
- **4.3 Hierarchy**
- Creating hierarchies
- Drill-down and drill-up
- Example: Country → State → City

Module 5: Filters in Tableau 5

- **5.1 Data Source Filters**
- Filtering data at the data source level
- Performance benefits
- **5.2 Extract Filters**
- Extract vs Live connection
- Filtering data while creating extracts
- **5.3 Live Connection Filters**
- Applying filters to live data connections
- **5.4 Quick Filters**
- Adding filters to worksheets
- Filter display options
- **5.5 Dimension Filters**
- Filtering categorical data
- Top, Bottom, and Conditional filters
- **5.6 Measure Filters**
- Filtering aggregated values
- Range filters
- **5.7 Cascading Filters**
- Only Relevant Values concept
- Filter dependency
- **5.8 Context Filters**
- Primary vs Secondary filters
- Order of execution
- Performance optimization using context filters

Module 6: Axis Concepts 6

- **6.1 Dual Axis**
- Combining two measures with different scales
- Dual-axis charts (Bar + Line)
- **6.2 Synchronizing Axis**
- Synchronizing dual axes with same scale
- **6.3 Blended Axis**
- Using two different charts with a single axis
- Use cases

MODULE 06 - TABLEAU - CONTINUED

Tableau · continued

18 modules

Module 7: Charts & Visualizations 7

- **7.1 Donut Chart**
- Creating donut charts using dual axis
- Formatting and labeling
- **7.2 Lollipop Chart**
- Bar + circle chart combination
- Business use cases
- **7.3 Best Practices**
- Choosing the right chart
- Avoiding visual clutter

Module 8: Apply Changes to Sheets 8

- **8.1 Apply to Worksheets**
- Applying formatting changes to all worksheets
- **8.2 Selected Worksheets**
- Applying changes to selected sheets only
- **8.3 Related Data Sources**
- Applying formatting across related data sources

Module 9: Data Formatting 9

- **9.1 Table Creation**
- Text tables
- Crosstab tables
- **9.2 Highlighting**
- Highlight tables
- Conditional formatting
- **9.3 Background Colors**
- Cell shading
- Banding rows and columns

Module 10: Quick Table Calculations 10

- **10.1 Running Total**
- Cumulative calculations
- **10.2 Difference Calculations**
- Difference from previous
- Difference from current
- **10.3 Percent Calculations**
- Percent difference
- Percent of total
- **10.4 Rank & Percentile**
- Rank (Ascending & Descending)
- Percentile analysis
- **10.5 Moving Average**
- Trend smoothing

Module 11: Table Calculation Options 11

- **11.1 Edit Table Calculation**
- Compute using:
- Table Across
- Table Down
- Pane Across
- Pane Down
- **11.2 Clear Table Calculation**
- Removing applied calculations

Module 12: Maps in Tableau 12

- **12.1 Unknown Locations**
- Identifying unknown geographic values
- **12.2 Edit Location**
- Manually correcting geographic roles
- **12.3 Filter Map Data**
- Filtering geographic data
- **12.4 Default Position**
- Showing data at default map position

MODULE 06 - TABLEAU - CONTINUED

Tableau · continued

18 modules

Module 13: Analytics Pane 13

- **13.1 Lines**
- Constant line
- Reference line
- **13.2 Bands**
- Reference bands
- Distribution bands
- **13.3 Statistical Analysis**
- Average line
- Clustering
- Totals
- **13.4 Forecast**
- Trend and predictive forecasting

Module 14: Dashboard Creation 14

- **14.1 Dashboard Actions**
- Action types overview
- **14.2 Highlight Actions**
- Menu, Hover, Select
- **14.3 Filter Actions**
- Interactive filtering between sheets
- **14.4 Navigation Actions**
- Go to URL
- Go to Sheet

Module 15: Tableau Functions 15

- **15.1 Number Functions**
- ROUND, ABS, CEILING, FLOOR
- SIGN, SQRT, SQUARE
- **15.2 Aggregate Functions**
- SUM, AVG, MIN, MAX
- COUNT, COUNTD
- **15.3 Logical Functions**
- AND, OR
- IF, ELSEIF
- IFNULL, ISNULL, ZN
- **15.4 String Functions**
- UPPER, LOWER
- LEFT, RIGHT, MID
- SPLIT, CONTAINS
- ENDSWITH, FIND, FINDTH
- **15.5 Table Calculation Functions**
- FIRST, LAST
- INDEX
- RANK, RANK_DENSE
- **15.6 Date Functions**
- TODAY, NOW
- DATEDIFF, DATEADD
- DATENAME, DATEPART

Module 16: Level of Detail (LOD) Expressions 16

- **16.1 FIXED**
- Fixing calculation granularity
- **16.2 EXCLUDE**
- Excluding dimensions from calculations
- **16.3 LOD Best Practices**
- Performance considerations
- Real-time examples

Module 17: Sets & Parameters 17

- **17.1 Sets**
- Static sets
- Dynamic sets
- Set operations
- **17.2 Parameters**
- Creating parameters
- Parameter controls
- Using parameters in calculations

Module 18: Data Connections 18

- **18.1 Data Joining**
- Inner, Left, Right, Full joins
- Join calculations
- **18.2 Data Blending**
- Primary vs Secondary data sources
- Relationship between blended data

MODULE 5 OF 6 | REAL-TIME PROJECTS

5 Two projects. One healthcare portfolio.

Both projects are built end to end on the course tools: SQL, Power BI, Excel, Advanced Excel and Python.

2 projects

PROJECT 01 · HEALTHCARE DOMAIN

Real-Time Project 1: HealthCare Domain

Solve 20+ Real-World Healthcare Business Requirements.

Database Design → SQL Development → Data Analysis → Performance Optimization

SQL | Power BI | Excel

PROJECT 02 · HEALTHCARE PLATFORM

Real-Time Project 2: Enterprise Healthcare Platform

Design and implement a modern Healthcare Data Platform using Power BI Analytics and Reporting services to process patient, hospital, clinical, and operational data for reporting and analytics.

SQL | Power BI | Excel | Advanced Excel | Python

Learning Outcomes

After completing this project, you can confidently showcase experience in:

- ✓ Power BI Reporting
- ✓ Business Process Understanding
- ✓ End-to-End Power BI Implementation in Cloud
- ✓ Power BI Data Analytics
- ✓ Performance Optimization

PROJECT 1 - OPERATIONAL FLOW

1. Healthcare DB
2. Patients
3. Doctors
4. Appointments
5. Treatments
6. Billing
7. Insurance
8. SQL Analysis
9. Stored Procedures
10. Performance Tuning
11. Business Reports

CAREER GUIDANCE

- Resume Optimization
- LinkedIn Optimization
- ATS-Friendly Resume
- Interview Strategy
